

KERFKORE®

Kerfkore offers many types of **Green Products**

Need to go Green?

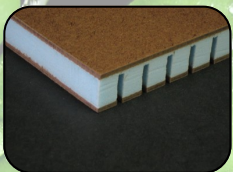

Kerfkore-Green is made from a NAF (no added formaldehyde) core that is certified to be 100% recovered and recycled fiber. Kerfkore-Green is a bendable product that can be laminated flat and then cold formed into virtually any shape. It allows for the attachment of most semi-rigid face materials like veneer, HPL, metal, and other desirable products. This product will produce a smooth and symmetrical radii even down to 3 1/2".

FlexGreen is an NAF product that consists of a face made of eucalyptus fiber hardboard attached to a particleboard substrate that is made from 100% recovered and recycled fiber. High quality face veneers can be cold or hot pressed to the product while flat and then post bent into desired shapes down to 16" radii.

Foamkore-Green is constructed with a eucalyptus fiber hardboard face and back attached to a lightweight polystyrene core. This panel produces a NAF product made from reclaimed and recycled materials. Foamkore-Green is a lightweight panel used where weight reduction is desired. Its balanced panel construction provides stability without the weight.

Kerfed Foamkore-Green is constructed with a eucalyptus fiber hardboard face and back attached to a lightweight polystyrene core. This panel produces a NAF product made from reclaimed and recycled materials. Kerfed Foamkore-Green is a bendable lightweight panel used where weight reduction is desired.

All materials are environmentally friendly and help to contribute to LEED credit points for MR 4.1, 4.2, 5.1, 5.2, 7 and EQ 4.4!

Kerfkore is a member of the Forest Stewardship Council and is supportive of the use of sound environmental policies. We believe our environment is critical to our well-being and it is important to contribute.
